- 3.3 The average maximum instantaneous steaming rate is defined as the running average of the three highest hourly instantaneous steaming rates, as observed on the continuous chart recording. The average maximum instantaneous steaming rate shall be maintained at or below 120% of the average steaming rate attained during the most recent performance test conducted pursuant to the permit that demonstrated compliance with Permit Condition 3.1. If the tested emission rate is above 0.167 grains per dry standard cubic foot at 8% oxygen, when combusting wood product, the maximum average instantaneous steaming rate shall be limited to the steaming rate obtained by the following equation:

- Max. allowable avg. instantaneous steam rate =

$$\frac{(\text{avg. steam rate during test} \times 0.20 \text{ gr/dscf at 8\% oxygen})}{(\text{tested grain loading at 8\% oxygen})}$$

Except during performance tests conducted to establish compliance at a higher steaming rate, whenever the steaming rate exceeds the allowable steaming rate, the permittee shall take corrective action within a reasonable time but no longer than 24 hours from the discovery of the exceedance to bring the steaming rate to the allowable rate or below.

[IDAPA 58.01.01.322.01, 3/19/99]

- 3.4 While combusting wood products, the permittee shall conduct a PM performance test at maximum desired operating capacity in accordance with the procedures outlined in 40 CFR Part 60, Appendix A, Method 5, or a DEQ-approved alternative method, as provided in Permit Condition 2.11. The test shall be performed during the first 12 months of the permit term to demonstrate compliance with Permit Condition 2.1.

The permittee shall monitor and record the steam production rate of the boiler during each test. A visible emissions evaluation shall be performed during each performance test. The visible emissions evaluation shall be conducted in accordance with the procedures contained in IDAPA 58.01.01.625.

If the particulate grain loading measured in the initial performance test is less than or equal to 75% of the emissions standard in IDAPA 58.01.01.677, no further testing shall be required during the permit term. If the particulate grain loading measured during the performance test is greater than 75%, but less than or equal to 90% of the emissions standard in IDAPA 58.01.01.677, a second test shall be required in the third year of the permit term. If the particulate grain loading measured during the performance test is greater than 90% of the emissions standard in IDAPA 58.01.01.677, the permittee shall conduct a performance test annually.

[IDAPA58.01.01.322.06, 5/1/94; IDAPA58.01.01.322.09, 5/1/94]

- 3.5 The sander-dust boiler shall be fueled exclusively by wood products and natural gas.

[IDAPA 58.01.01.322.01, 3/19/99]

- 3.6 An O&M manual shall be developed within 60 days of issuance of this permit. The O&M manual shall be updated as necessary and shall include, at a minimum, the most recent general descriptions of the equipment; the normal operating conditions and procedures for the boiler; startup, shutdown, and maintenance procedures; upset conditions guidelines; and corrective action procedures.

- 3.7 The permittee shall at all times maintain in good working order and operate, as efficiently as practicable, the Sander-dust boiler.

[IDAPA 58.01.01.322.01 (state-only), 3/19/99]

- 3.8 The boiler steam shall not be superheated and the maximum pressure shall be limited to 300 psi absolute, by means of a pressure relief valve which bears the "Valve Repair (VR) Stamp" of a certified valve repair company that is recognized by the loss-prevention insurance carrier. The stamp on the pressure relief valve and associated documentation shall be maintained onsite and shall be made available for review by DEQ representatives upon request.

[PTC Condition]

Monitoring and Recordkeeping Requirements

- 3.9 The permittee shall install, operate, calibrate, and maintain a device to continuously monitor and record the steam production rate of the sander-dust boiler. At least once per day, the maximum instantaneous steaming rate achieved during each hour of operation shall be recorded and compared to the maximum allowable average instantaneous steaming rate. During any period of time that the hourly instantaneous rate is higher than the maximum allowable rate, a running three-hour average instantaneous steaming rate will be calculated. If this running three-hour average rate exceeds the maximum allowable steaming rate, corrective action will be taken, as required in Section 3.3. If the continuous steaming rate measurement system becomes inoperable, a backup monitoring method consisting of manual hourly instantaneous readings or calculations shall be implemented within 96 hours of the continuous steaming rate measurement system becoming inoperable, and shall be used until the original system is operational.

[IDAPA 58.01.01.322.06, 5/1/94]

- 3.10 The permittee shall conduct monthly one-minute observations of each affected emissions point or source using EPA Method 22 (in 40 CFR Part 60, Appendix A). If visible particulate matter emissions are observed for any emissions point, a six-minute observation using EPA Method 9 shall be conducted. The visible emissions evaluation shall be performed during daylight hours under normal operating conditions. The results of each evaluation shall be recorded and maintained as required in Permit Condition 2.12. If four consecutive monthly Method 22 observations indicate that no visible particulate matter emissions are observed from any of the four observations or if four consecutive monthly six-minute observations using Method 9 indicate that opacity is below 20% for each of the four 6-minute observations, or any combination of four consecutive monthly Method 22 or Method 9 observations, the frequency of observations decreases to once per quarter. If any quarterly Method 9 observation indicates opacity is greater than 20%, the observation frequency reverts to monthly.
